

Supplier name: Coconnect

Publication date: 10/1/2023

Commitment to achieving Net Zero

Coconnect is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2021	
Additional Details relating to the Baseline Emissions calculations.	
Our emissions data is reported in line with the GHG Protocol Corporate Accounting and Reporting Standards.	
<u>Baseline Year</u>	
We have chosen January to December 2021 as our baseline reporting year, as we have the most reliable data from this period across Scopes, 1, 2 and 3. We have reported on all the required emissions and can confirm that the reporting for our Scope 1 & 2 emissions is in accordance with the Streamlined Energy and Carbon Reporting regulations whilst the mandatory subset of Scope 3 emissions has been calculated in accordance with the GCH Protocol's Technical Guidance for Calculating Scope 3 Emissions (version 1.0).	
Our reporting period will run from January to December of each reporting year.	
Baseline year emissions: 2021	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	1.87
Scope 2	3.78

Scope 3 (Including Sources)	Waste generated We occupy an office space within Novatech’s building and as such do not have control over waste. Due to the volume of Novatech’s business operation we are unable at the time to estimate the usage Coconnect uses. Coconnect’s waste is minimal. Business Travel 0.0416 Employee commuting 0.6666 Upstream Transportation 24.05 Downstream Transportation 46.64
Total Emissions	77.0482 tCO₂e

Current Emissions Reporting

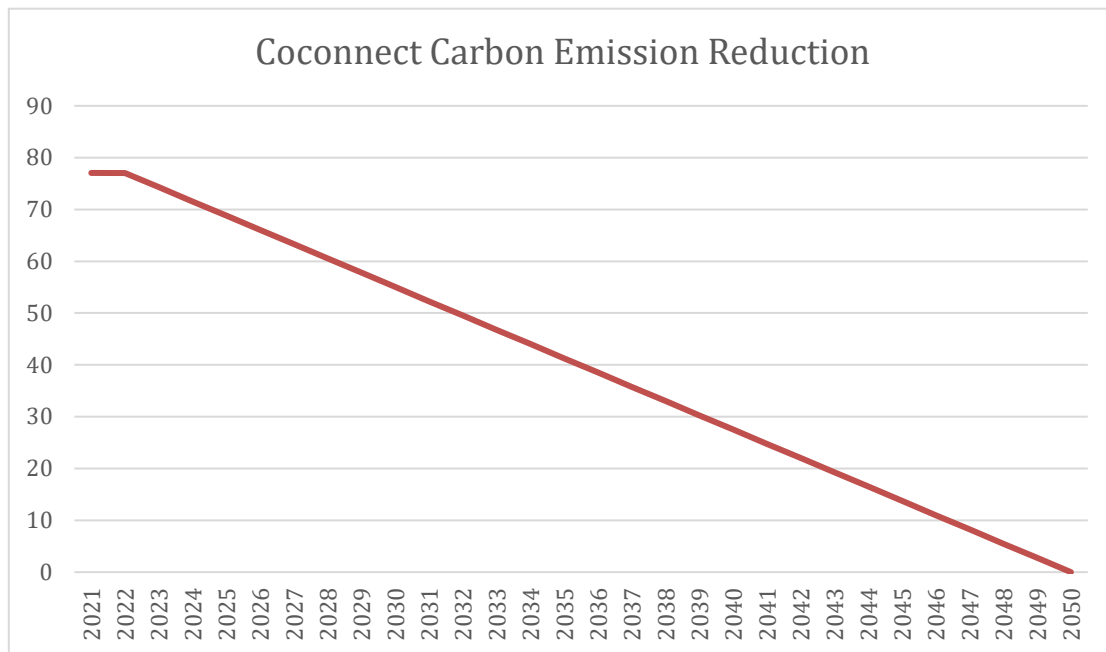

Reporting Year: 2022	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	1.87
Scope 2	3.8216
Scope 3 (Included Sources)	71.356
Total Emissions	77.0476 tCO₂e

Emissions reduction targets

We aim to work with Novatech to reduce our emissions by 2030 by approximately 30%. To continue our progress to achieving this, we have adopted the following carbon reduction targets:

- Promote reduced waste within our team as well as working with Novatech to reduce office-wide waste.
- Collaborate with Novatech to focus on reducing our Scope 1 and 2 emissions.
- Work with our supply chain to reduce our Scope 3 emissions, where possible.

Projected progress against these targets can be seen in the graph below:

Carbon Reduction Projects

As already mentioned above, Coconnect is based in a rented office space within Novatech's offices. In 2020 Novatech made improvements to the existing roof scheme, including an additional vapour barrier and 100mm insulation to prevent heat loss.

In addition to this, a 400kw solar panel array has been installed on our Harbour House location. This will deliver approximately 50% of the building electricity needs and has the added benefit of reducing building heat and the requirement of air-conditioning. We are working with Novatech to have this fully operational by the end of 2022.

Since 2019 we have invested in electric vehicles, and, alongside most staff working from home, commuter emissions have been drastically reduced by utilising these. We have implemented a 'Cycle to Work' scheme for all employees, and have secure bike storage available, as well as changing/showering facilities, within the office premises. This ensures that all considerations have been made to encourage and incentivise employees to use sustainable transport methods.

To assist in our joint target with Novatech of reducing Scope 1 and 2 emissions, we will pursue further carbon reductions projects such as:

Stationary Combustion:

- Replace gas heaters with air source heat pumps.

Purchased electricity:

- Deliver energy awareness training to all employees.
- Install an electric vehicle charging point with function to measure provision of electricity for charging.

Employee commuting:

- Continue to look at ways to promote/incentivise sustainable transport to work.
- Provide electric vehicle charging points usable for employees.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
